

HARISH KUMAR M

Cybersecurity Graduate | Aspiring SOC Analyst | Blue Team

harishkumarmanikandamoorthy@gmail.com • +91 9514337855 • linkedin.com/in/harishkumarcybersecurity • github.com/harishkumar-cybersecurity

PROFESSIONAL SUMMARY

Cybersecurity graduate focused on starting a career in Security Operations and Blue Team defense. Hands-on practice with Wazuh-based SOC monitoring, log analysis, alert investigation, networking fundamentals, and security tools including Splunk, Wireshark, Nmap, and Burp Suite. Built a home SOC lab and security projects to develop practical detection and investigation skills. Currently strengthening SOC workflows, threat detection, MITRE ATT&CK; analysis, Linux, and Python fundamentals.

CORE SKILLS

SOC & Detection	Wazuh, Splunk, log analysis, alert triage, event monitoring, threat detection, MITRE ATT&CK;, incident response fundamentals
Networking	TCP/IP, OSI model, DNS, DHCP, HTTP/HTTPS, NAT, subnetting, VLANs, network troubleshooting
Security Tools	Wireshark, Nmap, Burp Suite, Kali Linux, Recon-ng, theHarvester, dnsenum, wafw00f, Shodan
Systems & Scripting	Linux, Ubuntu, Windows, VirtualBox; Python (basic / revising), Java (basic / revising), Bash fundamentals

PROJECTS

Home SOC Lab — Threat Detection & Monitoring | Personal Project | 2026–Present

- Built a VirtualBox lab using Wazuh, Ubuntu, and Kali Linux to practice centralized security monitoring and endpoint log collection.
- Configured the environment for hands-on alert review, log analysis, and investigation of security-related activity.
- Investigated a Wazuh successful sudo-to-root alert (Rule 5402) and mapped the activity to MITRE ATT&CK; T1548.003 — Sudo and Sudo Caching.
- Practiced the SOC workflow of reviewing an alert, examining event context, validating activity, and documenting findings.

Simple Malware Scanner Using YARA | Personal Project

- Built a simple file-scanning project using YARA pattern-matching rules to identify files based on known characteristics and indicators.
- Practiced writing detection rules and understanding pattern-based malware detection and investigation concepts.

Web Raptor | Personal Cybersecurity Project

- Developed a web-security project focused on reconnaissance, information gathering, security assessment, and vulnerability identification.
- Explored security testing concepts and documented findings in a structured format.

INTERNSHIP EXPERIENCE

Cybersecurity Intern | Kaashiv Info Tech | 2024

- Gained practical exposure to common cyber attack types, threat analysis, vulnerability identification, and cybersecurity tools.
- Worked with simulated security environments to understand security events and investigation concepts.
- Practiced documenting security observations and findings in structured reports.

TRAINING & LEARNING

- **LetsDefend — SOC Analyst Learning Path:** SOC fundamentals, alert investigation, security monitoring, incident response, and log analysis.
- **Certified Ethical Hacking (CEH) Training — Skill Logic Technology Institute:** ethical hacking fundamentals, attack techniques, vulnerability assessment, and security tools. *Training; not presented as a certification.*

EDUCATION

B.E. Computer Science & Engineering (Cyber Security)

Dhanalakshmi Srinivasan College of Engineering and Technology, Tamil Nadu

2022–2026

CGPA: 7.9 / 10

CAREER TARGET

Seeking an entry-level SOC Analyst / Security Operations opportunity where I can apply hands-on lab experience, networking fundamentals, log analysis, and defensive security knowledge while continuing to grow in incident detection and response.
