PROFESSIONAL SUMMARY

Cybersecurity graduate (B.E. CSE, Cybersecurity Specialization) seeking SOC Analyst L1, Junior SOC Analyst, and Cybersecurity Analyst roles. Hands-on with security alert monitoring and triage, log analysis, and incident investigation in a self-built Wazuh SIEM lab, plus vulnerability assessment and security reporting from an internship and projects. Solid networking foundation (TCP/IP, DNS, ports, protocols) and knowledge of MITRE ATT&CK. Fresher, available to join immediately.

CORE SKILLS

SOC / Incident Analysis: Security alert monitoring and triage, threat detection fundamentals, security incident investigation, log analysis, authentication event analysis, brute-force attack detection, incident response fundamentals, security reporting and documentation

SIEM (Wazuh): Server setup, agent integration, alert analysis, alert severity and rule understanding, authentication log monitoring, service troubleshooting

Threat Intelligence and OSINT: IOC fundamentals, MITRE ATT&CK, phishing analysis, Shodan, Recon-ng, theHarvester

Vulnerability Assessment: Nmap, Burp Suite, CVSS, vulnerability identification, findings documentation

Networking: OSI model, TCP/IP, TCP and UDP, IP addressing, subnetting, VLAN, DHCP (DORA), NAT, DNS, HTTP/HTTPS, common protocols and ports, basic network troubleshooting

Operating Systems: Linux (Ubuntu, Kali), Windows

Other Tools: Kali Linux, FoxyProxy, dnsenum, wafw00f; basic Python and Java

PROJECTS

Wazuh SOC Home Lab (Personal Project) | VirtualBox: Wazuh Server, Ubuntu Endpoint, Kali Linux Attacker

- Built and configured a Wazuh SIEM server and connected an Ubuntu endpoint as a monitored agent to collect logs and security events centrally.
- Generated 20+ failed SSH login attempts from Kali Linux, then investigated the resulting Wazuh alerts to identify source IP, affected endpoint, username, timestamps, and alert severity.
- Analyzed repeated authentication failures as potential brute-force activity and reconstructed the event sequence from /var/log/auth.log.
- Investigated a Wazuh alert for a successful sudo-to-root event (rule 5402) and mapped it to MITRE ATT&CK T1548.003 (Sudo and Sudo Caching).
- Investigated HTTP security events in Wazuh and troubleshot Wazuh services to keep the SIEM operational.

Simple Malware Scanner using YARA (Personal Project)

- Built a simple malware scanner using YARA pattern-matching rules to scan files for known characteristics and indicators.

Web Raptor | Web Security Assessment Project

- Performed web reconnaissance and a basic vulnerability assessment of a website to identify security issues.
- Documented findings in a structured report.

INTERNSHIP AND TRAINING

Cybersecurity Intern | Kaashiv Info Tech | January 2024

- Studied common cyberattack types and performed threat analysis in simulated environments using cybersecurity tools.
- Performed basic security and vulnerability analysis to understand common attack techniques.
- Documented security findings and prepared cybersecurity reports.

Cybersecurity and Ethical Hacking Training | SkillLogic Technology Institute

- Completed structured training in cybersecurity and ethical hacking fundamentals, covering reconnaissance, common attack techniques, and vulnerability identification.
- Practiced with Kali Linux, Nmap, and Burp Suite; applied the attacker's perspective to recognize suspicious activity in logs and alerts.

LetsDefend | SOC Analyst Learning Path

- Learning path covering SOC fundamentals, alert investigation, security monitoring, incident response, and log analysis.

EDUCATION

B.E. Computer Science and Engineering (Cybersecurity Specialization) | Dhanalakshmi Srinivasan College of Engineering, Coimbatore, Tamil Nadu | CGPA: 7.9 | 2026
